

stretcher series
500
 pediatric stretcher/crib

Pedigo's 500 Pediatric Crib Stretcher, with its full function capabilities represents the standard of excellence in hospital cribs. The aesthetically pleasing design makes it perfect for any facility.

Side Rails

Side rails have two-inch bar spacing and a special epoxy finish that is warmer to the touch than chrome.

Total Accessibility

The unique rounded corners reduce the overall size of the 500, yet provide the same amount of useful area on the 26½" x 55¾" mattress.

The two-post support system provides 97% access to the patient by the medical team.

Casters

As a pediatric transport stretcher, the 500 rolls easily on 5" oversized casters. Two of the four casters lock to secure the stretcher while a third steering caster may be engaged for increased control and maneuverability.

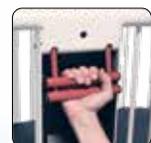

A True One-Handed Crib

For complete containment of the child, simply raise the counter balanced side rails to enclose the crib. Because the rails are counter balanced, there will be no sudden drop when released, preventing injury to the child or provider.

Dual-action release handle is childproof and easy to operate, even with a child in one arm.

Crib Security Handle

Squeeze Handle Together

Lift Rail Upward or Downward

STANDARD FEATURES

- 200 lbs. weight capacity rating
- Two 5" locking casters and one steering caster for increased maneuverability
- Trendelenburg/Reverse Trendelenburg
